

READY FOR ARRIVAL

MALE/5.5 YEARS-OLD

Two males are brothers that have been living wild on CCF's 58,000-ha private reserve near Otjiwarongo, Namibia, since at least July 2021, when CCF staff first noticed their tracks around the Centre. Male cubs from the same litter stay together for life and form coalitions to hunt.

MALE/4.5 YEARS-OLD

A male born at Erindi Private Game Reserve in March 2018. His mother was also born at Erinidi Reserve, and her mother is a cheetah that CCF returned to the wild at Erindi several years before. This cheetah a second-generation, wild-born cub to a rehabilitated female, proof of CCF's reintroduction success in Namibia.

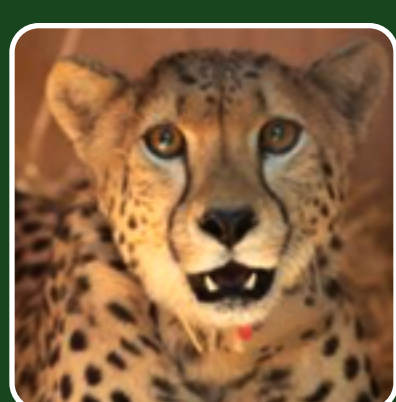

FEMALE/2 YEARS-OLD

Female found with her brother at a waterhole near the city of Gobabis in south-eastern Namibia. Both very skinny and malnourished. CCF believes their mother had died in a veld fire a few weeks prior. This cheetah has been living at the CCF Centre since September 2020.

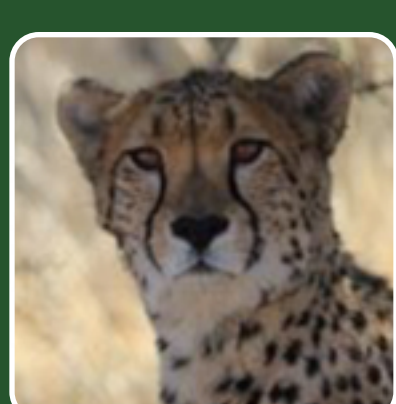

FEMALE/3-4 YEARS-OLD

Female wild female captured in a trap cage on CCF's neighbouring farm in July 2022, which is owned by a prominent Namibian businessman. She was released on CCF property, but was again caught on the same neighbouring farm two months later.

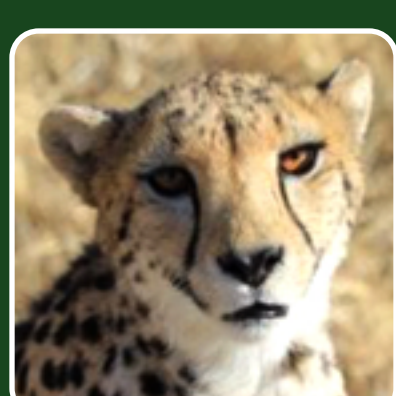

FEMALE/2.5 YEARS-OLD

Female born at Erindi Private Game Reserve in April 2020. Her mother was in CCF's cheetah rehabilitation programme and had been successfully returned to the wild a little more than two years ago.

FEMALE/5 YEARS-OLD

Female cheetah found on a farm near Gobabis, Namibia, in late 2017 by some of the farm workers. She was skinny and malnourished. The workers nursed her back to health. In January 2018, CCF staff learned about the animal and moved her to the CCF Centre.

FEMALE/5 YEARS-OLD

CCF staff picked up this female from a farm located in the north-western part of Namibia close to the village of Kamanjab in February 2019. Since arriving, she has become best friends with female #4, and the two are typically always found together in their enclosure.
